

In Year 1, is the Total Revenue of the Health Care Sector comparable to that of the Information Technology sector?

The average Total Revenue for Information Technology in Year 1 is \$15.5Bn whereas that for Healthcare in Year 1 is \$20Bn. However, the median Total Revenue for IT is \$4.4Bn whereas that for Healthcare is \$7.6Bn. This indicates that there may be outliers in Healthcare which are pulling its average Total Revenue higher.

Indeed, when we look at the bar chart, we see that 60% of all IT companies have Total Revenue between \$0bn and \$6bn, whereas 58% of Healthcare companies have a Total Revenue above \$6Bn. The IT company with the highest Total Revenue, AAPL (\$170.9Bn), has a total revenue of \$48Bn higher than Healthcare company UNH (\$122.5Bn) with the highest Total Revenue.

The total revenue of Healthcare and IT companies are similarly clustered with IT slightly more spread out. We can see this due to their similar standard deviations \$30.7B for Healthcare versus \$30.9B for IT. This is also seen in the range for total revenue for the two sectors \$170B for IT versus \$121B for Healthcare. Overall, the average IT company has lower Total Revenue compared to the average Healthcare company based on their medians. However, the IT industry has some outliers with total revenue higher than the highest Healthcare companies.
